## INQUIRY AND ANALYSIS VALUE RUBRIC

for more information as contact and a contac

The VALUE rubrics were developed by teams of faculty experts representing colleges and universities across the United States through a process that examined massyinsgic campus rubrics and related documents for each learning outcome and incorporated additional feedback from faculty. The rubrics articulate furtamental criteria for each learning outcome, with performance descriptors demonstrating progressively more solpisticated levels of attainment. The rubrics are intended for institutional evel use in evaluating and discussing student learning, not for grading. The core expectations articulated in all 15 of the VALUE rubrics can and should be translated into the language of individual campuses, disciplines, and even courses that examined massyinsgic campus rubrics and related documents for each learning outcome, with performance descriptors demonstrating progressively more solpisticated levels of attainment. The rubrics are intended for institutional evel use in evaluating and discussing student learning, not for grading. ## Definition

Inquiry is a systematic process of exploring issues, objects or works through the collection and analysis of evidence that selts in informed conclusions or judgments. Analysis is the process of breaking complex topics or issues into parts to gain a better understanding of them.

## Framing Language

This rubric is designed for use in a wide variety of disciplines. Since the terminology and process of inquiry are discipline-specific, an effort has been made to use broad language which reflects multiple approaches and assignments while addressing the fundamental elements of sound inquiry and analysis (including topic selection, existing, knowledge, design, analysis, etc.) The rubric language assumes that the inquiry and analysis process carried out by the student is appropriate for the discipline required. For example, analysis using statistical methods is appropriate for the discipline then a student would be expected to use an appropriate statistical methodology for that analysis. If a student does not use a discipline process for any criterion, that work should receive a performance rating of "1" or "0" for that criterion.

In addition, this rubric addresses the products of analysis and inquiry, not the processes themselves. The complexity of inquiry and analysis tasks is determined in part by how much information or guidance is provided to a student and how much the student constructs. The more the student constructs, the moreometric the inquiry process. For this reason, while the rubric can be used if the assignments or purposes for work are unknown, it will work most effectively when those are known. Finally, faculty are encouraged to adapt the essence and language of each boxic criterion to the disciplinary or interdisciplinary context to which it is applied.

## Glossary

The definitions that follow were developed to clarify terms and concepts used in this rubric only.

- Conclusions: A synthesis of key findings drawn from research/evidence.
- Limitations: Critique of the process or evidence.
- Implications: How inquiry results apply to a larger context or the real world.
